Making great fires since 1951

freestanding Stoves

Made in Britain

60f

LOOK AT THE FIRE

At Jetmaster Fires we are proud of our products, but we know that ultimately it is about the fire. Our new 60f without a doubt is a stove that offers you the greatest view of the fire for a stove of this overall size. The great view does not come at a compromise either, efficiency is 83% and the wonderful air curtain keeps the glass clear.

BUILD QUALITY AND GUARANTEE

All Jetmaster Fires are built to the very highest standard. During the manufacture process we have refined the assembly process to ensure that every unit is as good as the next one. Moving parts have been reduced to a minimum to ensure longevity of the appliance and ease of use for you the homeowner. All Jetmaster Fires stoves come with a 5-year guarantee.

VERSATILITY

Although the freestanding stoves are designed to burn wood they are able, with the help of a grate, to burn smokeless fuel and coal.

Carbon Saving Quick Facts

Jetmaster stoves will generally save you over 180kg's of carbon production annually, this is done through the efficient use of fuel that is renewable (wood).

This Saving will improve the value on your homes energy performance certificate, instantly increasing the value of your home.

A further benefit is the ability to reduce cold air flow into your home, this is done using the optional sealed external supply, this ensures that the home can essentially be sealed and no external air will need to flow into the house to fuel the fire.
